

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	29 September 2026
Team ID	6
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	IT Ticket Creation	• Capture Caller information. • Capture Short Description and Description of the issue. • Create a new IT ticket with a new ticket number.
FR-2	Automatic Ticket Classification	• Automatically identify the appropriate Category. • Automatically identify the appropriate Subcategory. • Automatically classify IT tickets based on the issue description.
FR-3	Category and Subcategory Dependency	• Configure dependent choice logic between Category and Subcategory. • Display only relevant Subcategory choices based on the selected Category. • Maintain the following dependency mapping: Wi-Fi → Network, Projector → Hardware, Forgot Password → Access, Slow Computer → Performance.
FR-4	Automated Ticket Notification	• Send an automated email notification to the Caller when a ticket is created. • Include relevant ticket information in the notification.
FR-5	Structured Ticket Data Management	• Store ticket information in a structured and standardized format. • Maintain consistent field types, choices, references, and dependencies.
FR-6	Ticket Assignment and Tracking	• Store Assigned Group and Assigned To information. • Maintain ticket State using predefined choices such as New, In Progress, On Hold, Resolved, and Closed.
FR-7	Maintainability and Scalability	• Configure the solution so that fields, categories, subcategories, and business logic can be easily maintained. • Support future expansion of ticket categories, classification rules, notifications, and automation.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The ticket form should provide simple and consistent data entry, with relevant Subcategory options displayed based on the selected Category.
NFR-2	Security	Ticket information should be accessible only to authorized users according to the configured ServiceNow access controls and roles.
NFR-3	Reliability	Ticket creation, classification, assignment, data storage, and email notification processes should operate consistently without unnecessary manual intervention.
NFR-4	Performance	Ticket classification and dependent choice selection should be processed efficiently without causing significant delays to the user.
NFR-5	Availability	The ticketing functionality should be available whenever users need to create and manage IT support tickets.
NFR-6	Scalability	The solution should support the addition of new categories, subcategories, classification rules, users, groups, and automation features as the IT support system grows.
