

Ideation Phase

Brainstorm & Idea Prioritization

Date	29 September 2026
Team ID	6
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	4 Marks

Auto Ticket Classification Idea Prioritization:

Step 1: Team Gathering, Collaboration & Problem Statement

Selected Problem Statement

The school IT helpdesk receives multiple incident requests daily from students and teachers, such as Wi-Fi issues, projector failures, password problems, and slow computers. Currently, IT staff manually review and categorize each request, making the process time-consuming and inefficient.

Customer / User

IT Helpdesk Staff

Key Problem

Manual incident classification and categorization causes increased workload, delays, and inefficient ticket management.

Step 2: Brainstorm, Idea Listing & Grouping

Idea	Description	Group
Automatic Ticket Classification	Automatically identify the type of incident from the ticket description.	Automation
Keyword-Based Analysis	Analyze keywords from the Short Description and Description fields.	Classification
Automatic Category Assignment	Assign the appropriate category based on identified keywords.	Automation
Automatic Subcategory Assignment	Select the relevant subcategory based on the assigned category.	Classification
Flow Designer Automation	Use ServiceNow Flow Designer to automate the complete classification workflow.	Workflow
Structured Ticket Information	Maintain consistent and standardized incident information.	Data Management
Automated Notification	Notify the caller when the incident ticket is created.	Communication

Example Classification Logic

Wi-Fi / Internet keywords → Network

Projector / Display keywords → Hardware

Password / Login keywords → Account / Access

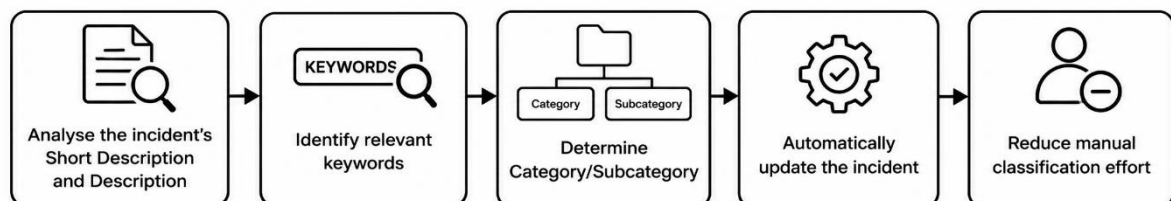

Slow / Performance keywords → Performance

Step 3: Idea Prioritization

Idea	Priority	Reason
Automatic Ticket Classification	High	Directly addresses the main problem of manual classification.
Keyword-Based Analysis	High	Enables the system to identify the issue from ticket descriptions.
Automatic Category/Subcategory Assignment	High	Reduces manual effort and improves consistency.
Flow Designer Automation	High	Connects the classification steps into an automated workflow.
Structured Ticket Information	Medium	Helps maintain consistent and manageable incident records.
Automated Notification	Medium	Improves communication with the caller after ticket creation.

Final Selected Idea:

ServiceNow Flow Designer–based Automated Incident Classification

This follows the template's intended progression from
problem selection → idea generation and grouping → idea prioritization.
