

Ideation Phase

Empathize & Discover

Date	29 September 2026
Team ID	6
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Empathy Map Canvas:

Understanding the IT Helpdesk Challenge:

Faster, Smarter & More Consistent Ticket Management:

IT helpdesk staff handle multiple support requests daily and spend significant time manually reviewing, classifying, and updating tickets. This repetitive process can lead to errors, delays, and increasing workload. They need an automated solution that accurately understands ticket descriptions, assigns the correct Category and Subcategory, provides timely notifications, and maintains standardized records—allowing them to focus more on resolving IT issues efficiently.
