

Acceptance Testing
UAT Execution & Report Submission

Date	29 September 2026
Team ID	6
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	5 Marks

REPORT:

1. Purpose of Document

The purpose of this document is to validate that the **School IT Ticket Classification and Notification System** works as expected and meets the defined functional requirements.

The testing focuses on validating the end-to-end automation process in ServiceNow, including:

- Creating a School IT Ticket with a Caller and Short Description.
- Automatically identifying the type of IT issue from the Short Description.
- Automatically assigning the appropriate **Category**.
- Automatically assigning the appropriate **Subcategory**.
- Verifying that the Category and Subcategory values are accurate.
- Confirming that an automated email notification is sent to the Caller.
- Verifying the generated email through **System Logs → Emails**.
- Ensuring that ticket information is stored correctly and consistently.
- Validating that the implemented solution performs the required ticket classification without manual intervention.

The UAT scenarios specifically validate Wi-Fi and Projector-related IT tickets and their corresponding automated classification and email notification.

2. Defect Analysis

Defect analysis is performed to identify and document any issues found during the testing of the School IT Ticket automation.

The following areas are validated during testing:

Defect / Validation Area	Expected Result	Status
Ticket Creation	Ticket should be created successfully with the entered Caller and Short Description.	Pass

Wi-Fi Classification	Category should automatically be Network and Subcategory should be Wi-Fi .	Pass
Projector Classification	Category should automatically be Hardware and Subcategory should be Projector .	Pass
Category–Subcategory Dependency	Appropriate Subcategory should be displayed according to the Category.	Pass
Ticket Data	Ticket information should be stored accurately.	Pass
Email Notification	Email should be sent automatically to the Caller Email ID.	Pass
Email Verification	Notification should be available under System Logs → Emails .	Pass

Defect Summary

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Total
By Design	0	0	0	0	0
Duplicate	0	0	0	0	0
Fixed	0	0	0	0	0
Not Reproduced	0	0	0	0	0
Skipped	0	0	0	0	0
Won't Fix	0	0	0	0	0
Total	0	0	0	0	0

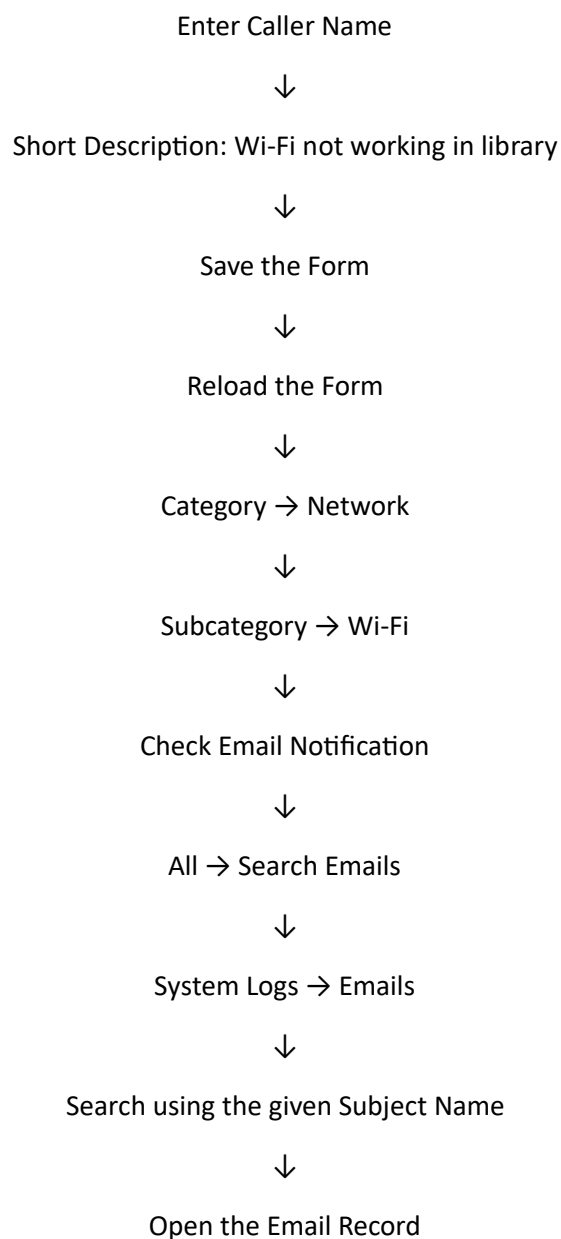

3. Test Case Analysis

The following test cases are used to validate the automated ticket classification and notification functionality

Test Case ID	Test Case	Test Input / Scenario	Expected Result	Status
TC-01	Wi-Fi Ticket Classification	Short Description: “Wi-Fi not working in library”	Category → Network ; Subcategory → Wi-Fi	Pass
TC-02	Projector Ticket Classification	Short Description: “Projector not turning on.”	Category → Hardware ; Subcategory → Projector	Pass
TC-03	Email Notification – Wi-Fi	Create Wi-Fi ticket and check email logs	Email should be sent to the Caller Email ID	Pass

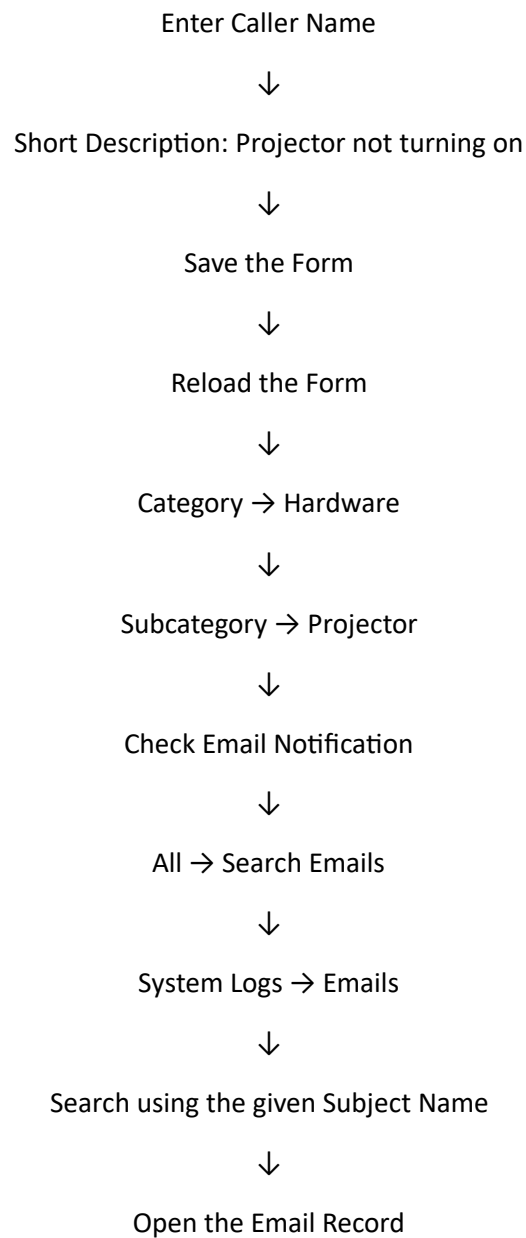

TC-04	Email Notification – Projector	Create Projector ticket and check email logs	Email should be sent to the Caller Email ID	Pass
TC-05	Category– Subcategory Dependency	Select/verify Category and corresponding Subcategory	Relevant Subcategory should be displayed	Pass
TC-06	Ticket Data Validation	Verify the saved ticket after classification	Ticket fields should contain accurate and standardized data	Pass

Test Case Execution – Wi-Fi

Result: PASS

Test Case Execution – Projector

Result: PASS

Overall Test Case Result:

Test Metric	Result
Total Test Cases	6
Passed	6
Failed	0
Not Tested	0
Pass Percentage	100%
